Notes on this layout - This is meant just for an estimate and consultation, so I assume this is not meant to be production-ready... In fact, I'd love to try different wood thicknesses for the hangers.

- We've got moustache clothes hangers and lotus-shaped coasters.

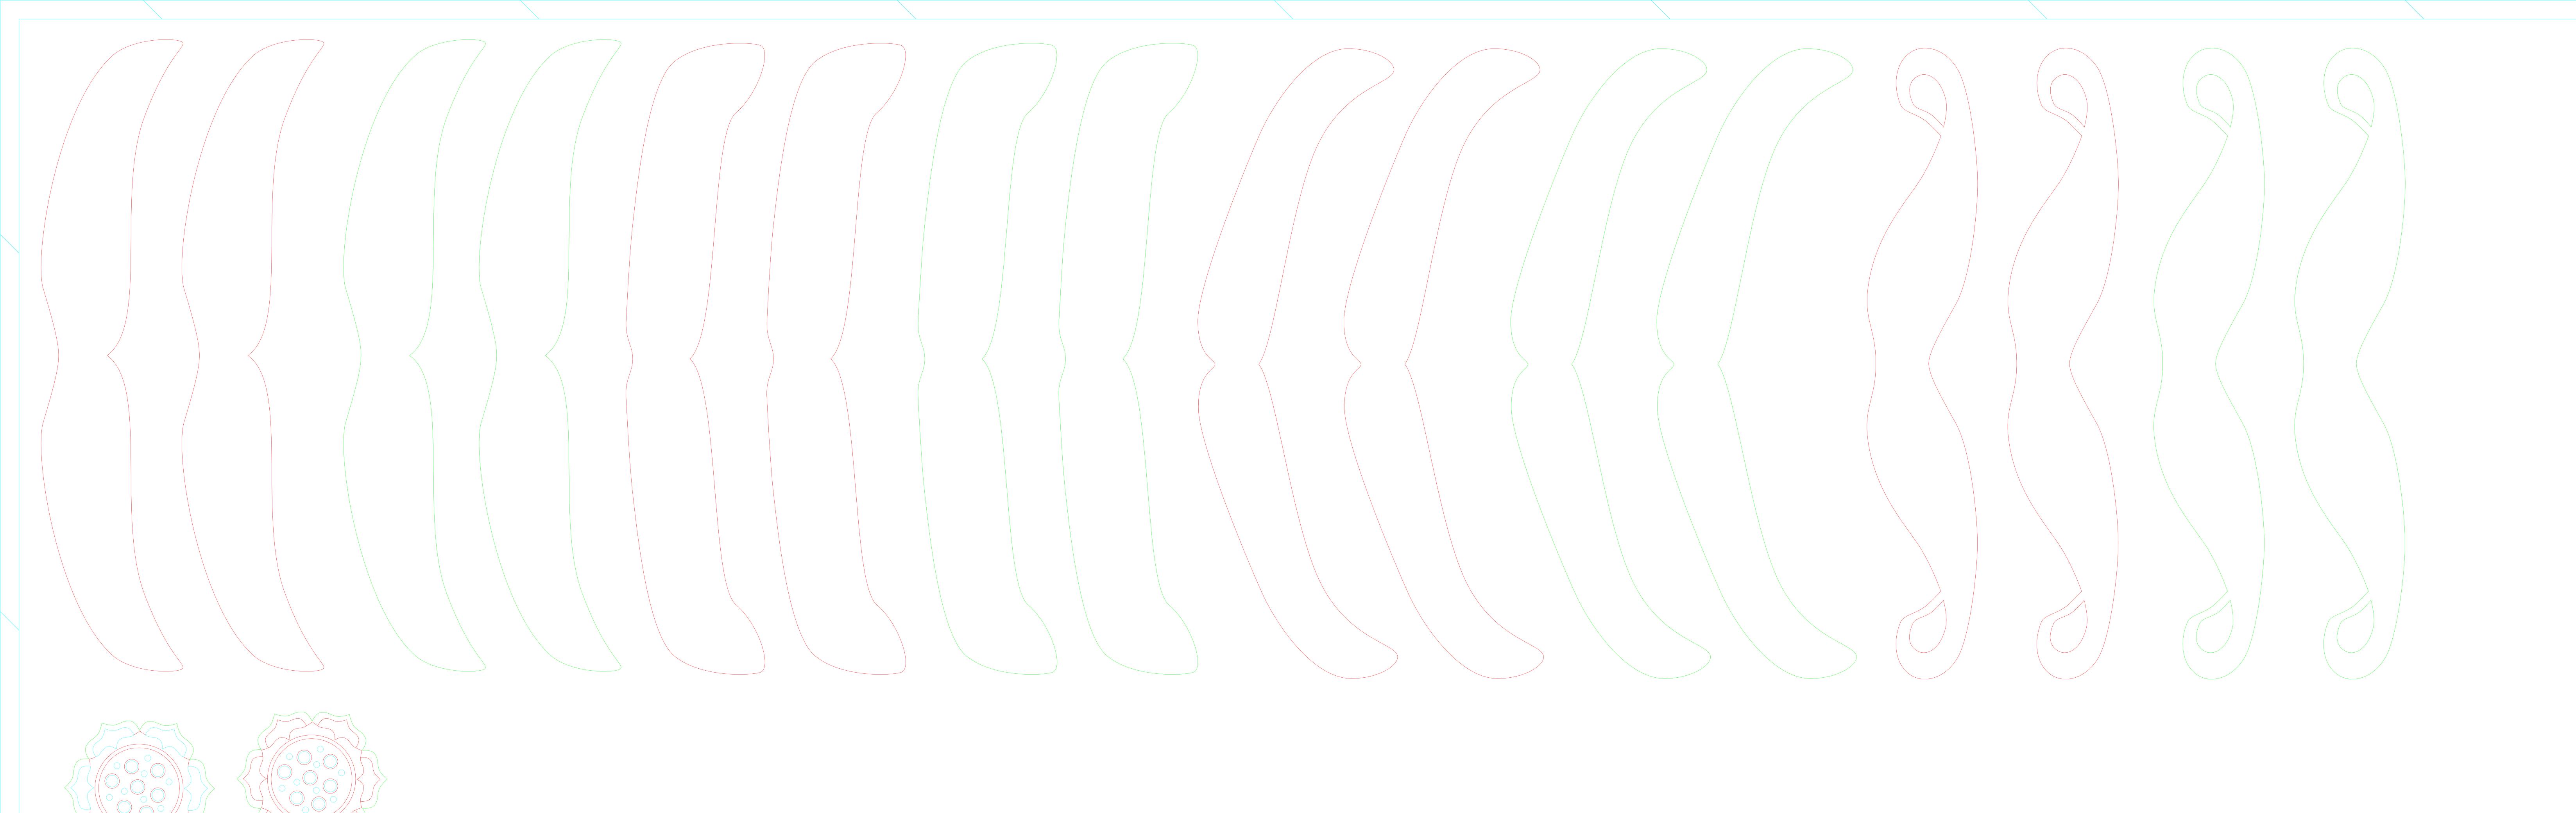

- For the moustaches, I'd like to try and see how they look cut from both 1/4" and 1/2" plywood. I want the top half (look at it like it's a moustache -- the part closer to the nose) to have a rounded edge, I was thinking a 1/4" radius corner rounding end mill. The bottom half / part closer to the upper lip, I'd still want a sharp edge with no rounding. Wasn't sure how to mark that up for you. I also wasn't sure whether it would look better to cut along the line or just outside it, so I included both.

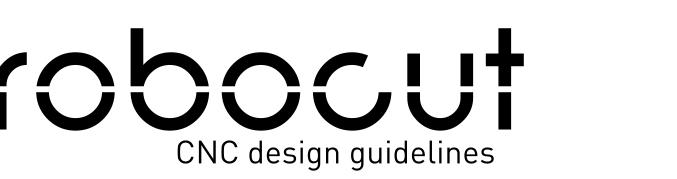

If possible, I would prefer for the grain of the wood to run perpendicular to the longer dimension of the moutstaches. If you can picture it-- that way when we stain it, the grain looks a bit like moustache hairs. (photo included)

- For the lotuses, I'd like to cut all the way around the outer edge (in green). The pockets marked in cyan I'd want to be about 1/8" deep. The stuff in red should be shallow engraving. I can send a photo of what they look like now -- they were lasercut in two layers and then glued together, but if I could mill them as one piece from the start that would be awesome.
